

# Hitachi Virtual Storage Platform E Series

The E Stands for Everyone

The VSP E Series is your team's newest midrange workhorse – no matter the workload. Plus, your data and applications are protected by a 100% data availability guarantee.

The VSP portfolio shares the same OS for consistent, simple application delivery up to 90%.

100% data availability guaranteed + up to 99.9999% of uptime across the portfolio.

Reduce manual tasks up to 70% with automated admin, analytics, and protection.

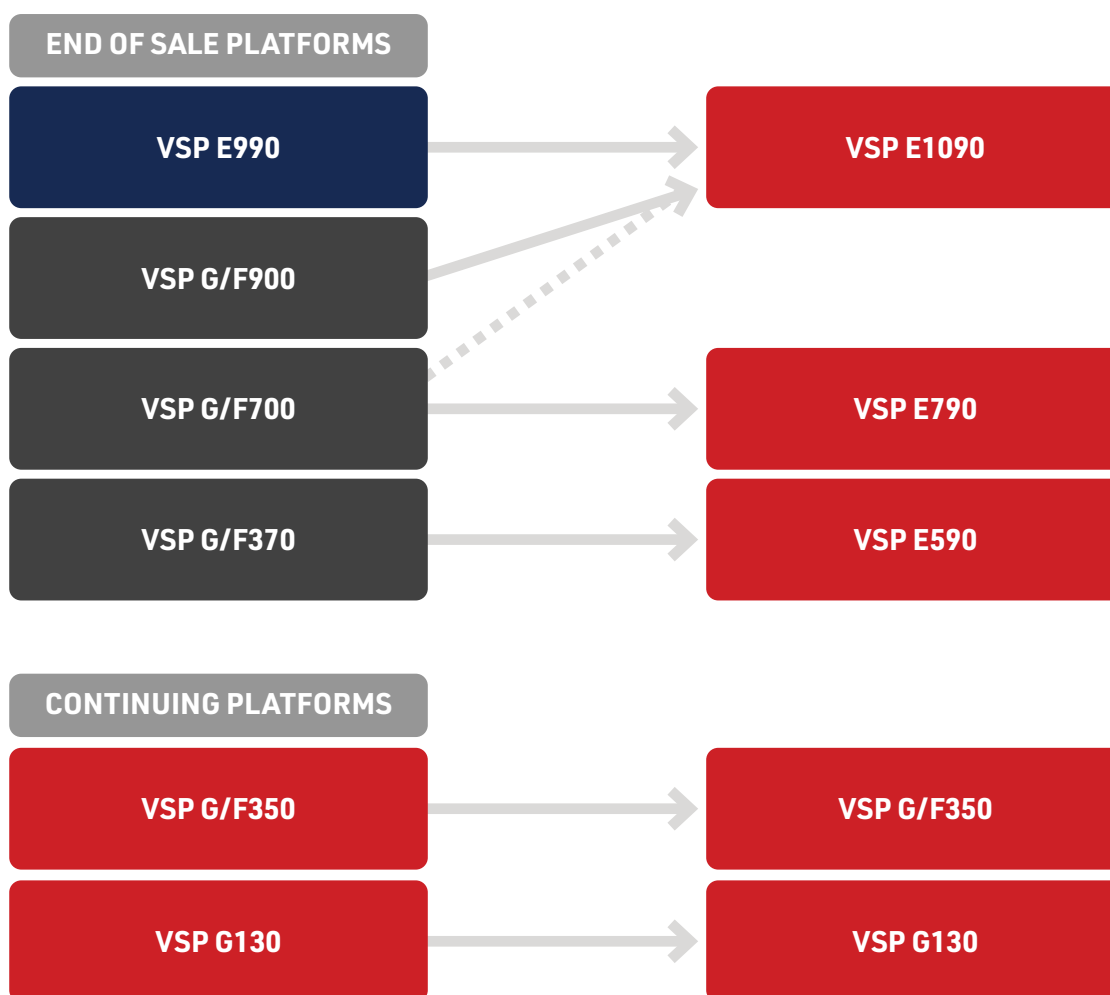

Best-in-class performance and scalability for apps, workloads, budget and business needs.

AI-powered software simplifies management and improves IT efficiencies.

Advanced data reduction technology offers a 4:1 sight unseen data reduction guarantee.

## VSP E1090 DELIVERS

The lowest latency of any NVMe midrange storage on the market @ 41 microseconds

1.44X greater bandwidth and more than 3X PBe than Pure Storage's highest-end array, FlashArray //XL170

3X+ greater IOPS and 18X more PBe storage capacity when compared to the Dell PowerMax 2000

2X greater IOPS and 1.8X more PBe of storage versus the Dell PowerStore 9000T

Hardware assisted data reduction technology offers improved data reduction, reducing the number of drives, **guaranteeing more usable capacity and up to 82% ADR throughput improvement over existing VSP E series**

VSP E series supports scale out with non-disruptive workload mobility across the cluster **65 nodes and 130 controllers**

VSP E series systems are self-installable and can be **up and running in < 30 minutes**
